

# What's new? AuditBase System v4.13

Several new features have been added to further enhance the AuditBase System. Much effort has been put into designing functionality that speeds up the user processes thus saving time.

Read more about what is new and don't hesitate to contact Auditdata sales and support for more information. You can also contact us to try out any of the new modules - FREE of charge!

## » AuditBase System

### **Booking**

The main changes made to the booking module relate to the search function and auto journal entry, which both speed up processing time significantly. The search for available time can be set up for fast and simple or advanced. Auto journal entry now includes the time, resource and appointment symbol with action codes selectable from a list.

### **Letters and print-outs**

Enhanced option of multiple selection of appointment letters and description of all letters. Date of birth and also patients' codes pass through to Word Documents and can be pasted in

When configured via the Administration tool, it is possible to define different print formats including Windows print option-dialogue and Print to file or Email.

### **Resource utilisation**

The resource definition and delete option has been moved to AuditBase Administration tool and now includes the possibility of outdating a resource.

Resource utilisation has been increased to handle up to 100 active resources!

### **Symbols**

Outdated symbols aren't shown in selection lists

### **Day view**

The day view dialogue is made adjustable in overall size. Column order and width can now also be adjusted.

### **Client information**

Cursor focus upon "New" can be set to either NHS no. or surname. The F3 search function can be configured to sort by e.g. surname. Date of birth is now on the client's details tooltip in every module

### **Tools menu**

The  $\Sigma$ -icon has been added for fast opening of a summary for the selected client.

Another shortcut added to this menu provides fast opening of the latest audiogram saved for the selected client.

### **Earmould dialogue**

To this dialogue a direct access to the client's waiting list references has been added. The right/left mould is now indicated by colours and today's date is auto inserted by double clicking.

### **Waiting list**

Intelligent selection of one or more clients has been added along with an optional warning when a new client is selected. Further, you can save time by using 'Prompt for user input' on waiting list actions with the new automatic journal entry, just as you can on letter and appointment events

The sorting and viewing of waiting lists is now configurable as well as the search for a specific list, referring party or client.

Column order and width can now be adjusted and sorted on 3 column values! This defined setup can be stored as site or user specific setting.

### **Invoicing**

With this new feature it is possible to edit entries according to e.g. invoice type.

### **Journal**

For a faster listing, you can configure how many journal entries you want shown at start up. A shortcut for full display of entries can be stored as site or user specific and the spell checking dictionaries have been updated

A cut and paste function has been added which provides for the use of different fonts and by defining tab stops, it is possible to adjust screen and print layout. Tabs are defined in the AuditBase Administration tool.

### **Audiogram**

A new feature enables automatic opening of the latest audiogram when entering the audiogram module.

A shortcut has been added for fast opening of audiogram and the option to sign the audiogram right after measuring.

### **NOAH**

In NOAH, the session list has been improved to open faster and the "Server busy"-error from new fitting modules has been solved.

### **Referring agents**

It is now possible to merge duplicate referring agents and also define additional ones.

### **Repair module**

New to this module is the possibility to start up and finish a work order in one routine.

## New AuditBase modules

### Treatment summary

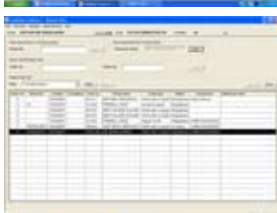

Available from the Journal tab, the treatment summary module offers configurable and easy overview. Different types of summaries can be saved with different elements and contents and it is possible to sign a summary as a medical record if it contains signable information. By doing so, the journal text is automatically signed. The summary function is configurable to include audiogram, journal, bearing instrument or earmould information, diagnoses, referrals, waiting list references and appointments.

### Task list

The task list makes it possible to define tasks, labels and default text descriptions in the AuditBase Administration tool.

Tasks can be defined as client related or general and assigned to a specific user or made general. You can set the priority for each task.

### Repair module

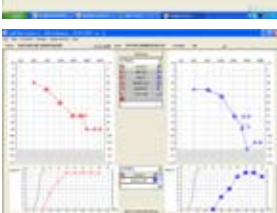

The repair module is offered as a limited or full version.

The limited version enables handling of repairs that involve external bodies whereas the full version offers control of internal repairs, assignment of technicians and control of components and tasks in the clinic.

### Audiogram viewer

The AuditBase audiogram viewer includes task list to communicate from ENT to Audiology and represent a valuable functionality at limited licensing costs.

### Graphical speech audiometry

Available from audiogram tab, graphical speech offers speech measurement results in an extended graphical form.

### Location handling

Offers the option to configure AuditBase per individual department and thereby associate settings with a specific location. Hence a location for a user logon and/or a workstation can be set up to handle waiting lists, resources, appointment and timetable symbols, letters, appointment stages, stock types and documents in the same manner.
